

Introduction

In 2018, the EU General Data Protection Regulation represented a significant modernisation of the EU's data protection law, incorporating significant new developments in technology and reflecting changes in the way that data is collected and processed. It replaced the Data Protection Directive of 1995, which had existed at the time of the previous legislation. The UK's departure from the European Union has resulted in a change little from an SME perspective. The European Union (Withdrawal) Act 2020 and the Data Protection Act 2018, the UK's Data Protection Act 2018, the UK's Data Protection Act 2018, the UK's Data Protection Act 2018 (in addition to other important laws such as the Privacy and Electronic Communications Regulations). These pieces of legislation are commonly referred to in legal and business documents as "the Data Protection Act 2018".

Note that these Guidance Notes cover data relating to individuals outside of the UK.

At the core of the UK GDPR are the principles of law, fairness, and transparency. Under these principles, you must have a lawful basis for collecting, holding, and processing personal data, you must only use it for the purposes for which it was collected, fairly, i.e. it should not be used in a way that is unexpected or misleading, and you must be transparent about how you use it.

Of central importance to these Guidelines is the principle of transparency, which is itself closely related to the individual "Right to be forgotten" under the UK GDPR. This essentially means that you must be open about the personal data you are collecting from (or about) them, the purposes for which you are using that data, how long you will hold it, and who (if any) you will share it with.

This all-important "Privacy Information" must be provided in a manner that is easily accessible to individuals, meaning that you should use plain language to concisely and clearly explain the information. This, it must be conceded, is not always easy because of the complexity of the law. The Data Protection Legislation requires you to provide the information required, to explain that information in a way that is understandable, and to provide a practical context in order to assist in completing your obligations.

Privacy Information can be found under various names. Some have a *Privacy Policy*, others prefer a *Privacy Notice* or a *Privacy Statement*. What is important is that it is clear to individuals where to find the information. In the case of our website, we call our website privacy information *Privacy Policy* (or *Privacy Notice* on our website) equivalents *Privacy Notice*.

commonly known simply as the GDPR. It is a law and one that took into account the changes in the way that data is collected and processed of personal data that simply did not exist at the time of the previous legislation, the Data Protection Act 1998. Following the UK's departure from the European Union, there have been certain contextual alterations which have resulted in a change little from an SME perspective. The European Union (Withdrawal) Act 2020 and the Data Protection Act 2018, the UK's Data Protection Act 2018, the UK's Data Protection Act 2018 (in addition to other important laws such as the Privacy and Electronic Communications Regulations). These pieces of legislation are commonly referred to in legal and business documents as "the Data Protection Act 2018".

Part 1. The Information Re

Whatever you decide to call it, your

- The name and contact details of the controller
 - It is important that data controllers are transparent about using their personal data.
- The name and contact details of the data protection officer (if applicable):
 - If you provide products or services to individuals in the EEA but are based outside the EEA, you must appoint an EEA-based data protection officer who can apply to businesses in the UK.
- The contact details of your data protection officer (if you have one):
 - Some organisations are required to appoint a data protection officer by law. Even if you are not required to do so, it is a good idea to have a single point of contact for all data protection matters).
- Details about the personal data you collect
 - It is important to consider the definition of “personal data” when providing this information. Personal data is ‘any information relating to an identifiable person. An identifiable person is one who can be identified, either directly or indirectly, by reference to an identifier such as a name, an identification number, location data, online identifier, or to one or more factors specific to the individual’s physical, biological, genetic, mental, economic, cultural, or social identity. Some identifiers in particular are likely to be a common form of identification used by many businesses.
- Details about how you collect personal data
 - In many cases, this will be clear in the context. Personal data collected, for example, via an online form or by signing up to a website or via a paper order form at your premises, should be clear to the individual. Less clear, however, is data collected via cookies and similar technologies. This information should cover this. If you collect personal data via cookies, you explain how, whether it seems obvious to you or not.
- The purpose or purposes for which you collect personal data:
 - Individuals have a right to know how you will use their personal data and your purposes for collecting it. You should ensure that you clearly identify the purpose(s) for which you collect personal data and ensure that those purposes are lawful and transparent.
- The lawful basis or bases on which you process personal data:
 - A range of lawful bases are set out in the Data Protection Legislation, including consent, contract, compliance with a legal obligation, public interest or for official functions.

- Your legitimate interests for (if this is your chosen lawful basis):
 - This is a flexible basis. Care must be taken, as it is not a *one-size-fits-all* solution and individuals are reasonable in their expectations of their privacy. Details of your legitimate interests must be provided to individuals.
- Where personal data is obtained from a third party, the category or categories of individual to whom it relates, the category or categories of recipient, and the purposes for which it is processed.
- Details of any third parties to whom you intend to transfer personal data (the recipients or at least the categories of recipient):
 - While it may not always be possible to provide full information, providing as much detail as possible is good for transparency. If possible, it is a good idea to refer to the privacy notices or policies of those third parties.
- Details of any transfers of personal data to international organisations or to international organisations:
 - It is important to keep records of transfers of personal data and can include transfers to a third party service provider in a non-UK country or to a third party service provider situated outside the UK.
 - From 1 January 2021, transfers of personal data to the EU. At present, transfers of personal data to the EEA are permitted as before. Furthermore, under the EU-UK Trade and Cooperation Agreement, EEA to the UK will continue to be permitted during a temporary period of up to 12 months pending an EU Commission adequacy decision as to the UK.
 - You should also state whether you have an adequacy decision, individual consent, transitional provisions, or approved safeguards (such as approved safeguards or approved safeguards). You will be able to make it if you have approved safeguards. You will be able to approve further safeguards if you have approved safeguards mentioned under the transitional provisions. You will be subject to EU approval if you have approved safeguards. You will be able to make choices as a business if you have approved safeguards. You will provide details of such choices if you have approved safeguards.
- Your retention periods for personal data does not have a specific retention period:
 - Always remember that you should not keep personal data for as long as you need it in light of the purpose(s) for which it was originally collected. For some purposes, retention periods are fixed by law, but in many cases, you will need to make your own decisions.

data (if this is your chosen lawful basis):

Part 2. Background - The Right to be Informed

This is what you're doing it all for. To ensure that you provide the required Privacy Information to individuals so that they can be informed.

The right to be informed is set out in Article 17 of the UK GDPR and, as noted above, it is directly tied to the principle of transparency and accountability, ensuring that individuals are aware of their personal data, and – as is the focus here – ensuring that they have enough information so that they can make informed choices.

There is no doubt that complying with the right to be informed is important to keep in mind that there are several reasons why this is the fact that by providing the required information with non-compliance, which can include fines and reputational damage.

A small business might well consider this a low priority, but by showing a willingness to comply, you may benefit from improved levels of customer loyalty and trust, which may even mean that individuals are more likely to share useful personal information about themselves.

over-arching principle, but providing the required information, your fulfilment of their right to be informed.

the UK GDPR and, as noted above, the main purpose of the UK GDPR is improving transparency and accountability of their personal data, and – as is the focus here – ensuring that they have enough information so that they can make informed choices.

as this can be onerous, but it is important to keep in mind that there are several reasons why this is the fact that by providing the required information with non-compliance, which can include fines and reputational damage.

Information Commissioner's list of reasons for processing personal data, you may benefit from improved levels of customer loyalty and trust, which may even mean that individuals are more likely to share useful personal information about themselves.

S A M P L E

Part 3. Exceptions

As important as the right to be informed, for example, required to provide data subjects with information that they already have when collecting personal data from them.

If you collect personal data from third parties, you are required to provide privacy information to the data subjects whose data is involved.

- They already have the required information;
- It would be impossible to provide the information;
- It would involve disproportionate effort;
- Providing the privacy information would impair (or make impossible) the achievement of the objective of the processing;
- Obtaining or disclosing the personal data is a legal requirement; or
- You are subject to an obligation to process the personal data in question.

It is important to note that the second and third exceptions apply in particular to processing for archiving purposes in the public interest, scientific or historical research purposes, subject to the conditions set out in Article 89 of the UK GDPR (as supplemented by section 19 of the Data Protection Act 2018). This suggests, therefore, that SMEs using personal data for business purposes may find it difficult to justify relying on the exceptions.

Furthermore, whatever your justification for relying on an exception, it is important to document your decision-making process and to ensure that you have appropriate management relating to data protection.

Even if an exception could apply, you should still make your Privacy Information publicly available, so as to increase the chances of data subjects seeing it. As a general rule, however, particularly in the SME context, it would suggest that providing Privacy Information directly as a matter of choice.

limited exceptions. You are not, for example, required to provide data subjects with information that they already have when collecting personal data from them.

If you collect personal data from third parties, you are required to provide privacy information to the data subjects whose data is involved.

- They already have the required information;
- It would be impossible to provide the information;
- It would involve disproportionate effort;
- Providing the privacy information would impair (or make impossible) the achievement of the objective of the processing;
- Obtaining or disclosing the personal data is a legal requirement; or
- You are subject to an obligation to process the personal data in question.

It is important to note that the second and third exceptions apply in particular to processing for archiving purposes in the public interest, scientific or historical research purposes or statistical purposes, subject to the conditions set out in Article 89 of the UK GDPR (as supplemented by section 19 of the Data Protection Act 2018). This suggests, therefore, that SMEs using personal data for business purposes may find it difficult to justify relying on the exceptions.

Furthermore, whatever your justification for relying on an exception, it is important to document your decision-making process and to ensure that you have appropriate management relating to data protection.

Even if an exception could apply, you should still make your Privacy Information publicly available, so as to increase the chances of data subjects seeing it. As a general rule, however, particularly in the SME context, it would suggest that providing Privacy Information directly as a matter of choice.

Part 4. Drafting Privacy Information

As noted above, it is important that your Privacy Information is presented in a concise and user-friendly way. An important part of your Privacy Information should be presented on a business-to-business website in a more technical manner, while your Privacy Information presented on a consumer website offering goods or services should be presented in a more user-friendly manner. In any case, it is good practice to avoid technical language and to use plain language.

The Information Commissioner's Code of Practice provides guidance on presenting your Privacy Information out on your target audience, amending it as necessary.

You should also ensure that you regularly review your Privacy Information to ensure that it is up-to-date with your actual use of personal data, changes in the law, official guidance, and best practice.

information in a concise and user-friendly way. Part 5. Dealing with Change

The ways in which a business uses personal data can be relatively fixed or relatively fluid, depending upon the nature of the business and the projects which new projects are handled. As covered in detail in our other Guidance on Data Protection Audits, it is important that you ensure that your personal data are properly managed.

If a new use of personal data is contemplated, you should determine the original lawful basis for processing, you may be able to continue with the same basis if you have obtained consent. If, on the other hand, the original basis was consent, you must identify and document a new lawful basis for processing, you may be able to continue with the same basis if you have obtained consent. If, on the other hand, the original basis was consent, you must identify and document a new lawful basis for processing it.

Consequently, your Privacy Information Statement should be kept fully informed of the ways in which your personal data are managed to ensure that data subjects are kept fully informed of the ways in which their personal data are managed. If any changes are made, it is important that you bring these changes to the attention of the affected data subjects.

S
A
M
P
L
E

Part 6. Dealing with Other

It is quite common for one organisation to share personal data with other organisations. In some cases, these third parties will be acting on the instructions of your business. In other cases, personal data may be shared between two controllers.

Regardless of the context, the sharing of personal data will have an impact on your Privacy Information. As stated above, if you share personal data with third parties, you must tell the data subjects to whom the data relates, the purpose of the sharing, the names of the organisations you are sharing their data with or at least the categories of those organisations.

Sharing Personal Data with Other Organisations

It is important that data subjects know who you are sharing their personal data with, irrespective of whether the recipient is acting as a data controller or a data processor.

The UK GDPR requires you to identify the categories of recipient. It may be necessary to share customer information for professional reasons, for example, to protect the identities of their clients confidentially. You should identify the category (e.g. IT service provider) and the purpose of the information given to data subjects and what is happening with their personal data.

Wherever possible, individual data subjects should be given a choice. This will not always be practical, but wherever it is, a choice should be given.

Obtaining Personal Data from Other Organisations

If you obtain personal data, for example from a third party, you are still required to provide Privacy Information to the data subjects unless you are able to rely on one of the exemptions outlined above in Part 5. We would consider it less likely that one of the exemptions would apply to the typical small business.

If an exemption does apply and you are unable to provide Privacy Information, you should be able to justify this. Providing Privacy Information would involve a disproportionate effort or would be likely to cause risks associated with processing the data. Conducting a Data Protection Impact Assessment is the best way to justify this.

As explained in Part 5, above, you must tell data subjects they are made aware of any change in purpose and the lawful basis for the data being used for a purpose different to that for which it was originally collected.

As explained in Part 5, above, you must tell data subjects they are made aware of any change in purpose and the lawful basis for the data being used for a purpose different to that for which it was originally collected.

S

As also noted above, while you are collecting personal data in this way (for example, when you communicate with the data subject or a third party).

provide Privacy Information at the time of collection (or, if later, no later than one month (or, if earlier, if you transfer the personal data to another party).

Obtaining Personal Data from Public Sources

A

Even if personal data is drawn from public sources, it is not a free-for-all. The Privacy Information requirements continue to apply.

As above, it is not a free-for-all. The Privacy Information requirements continue to apply (as above).

As when obtaining personal data from other sources, a Data Protection Impact Assessment must be conducted if the processing is likely to result in a high risk to individuals, or if it is impossible or would involve a disproportionate effort to provide Privacy Information.

As above, a Data Protection Impact Assessment must be mitigated, and a Data Protection Impact Assessment must be conducted if it is impossible or would involve a disproportionate effort to provide Privacy Information.

Even though personal data may be obtained from public sources, individual data subjects still need to be kept informed and their personal data must not be used in a way that might be likely to cause harm (the Information Commissioner's Office gives combining data from different sources as an example).

Individual data subjects still need to be kept informed and their personal data must not be used in a way that might be likely to cause harm (the Information Commissioner's Office gives combining data from different sources as an example), it is important that clear information about that processing is provided to the data subject.

M

As above, Privacy Information must be provided to the data subject as soon as possible, and no later than one month after obtaining the personal data.

As above, Privacy Information must be provided to the data subject as soon as possible, and no later than one month after obtaining the personal data (or, if later, as appropriate).

Part 7. Artificial Intelligence

Decision-Making

AI and machine learning are as of “making the world a better place”, but in the business world. While at this stage, many will not be using AI, the increasing adoption of AI tools could make it a reality for many sooner rather than later.

AI can take many forms and in business something that the UK GDPR has automated decision-making has ‘legal or similarly significant’ impact. It explains what personal data will be used and what the likely impact will be on the data subjects concerned.

In some cases, as new technologies are used to process existing personal data, for example – a customer database, for example – will be used for a new purpose, it is important to remember that, as stated in Article 6(4) of the GDPR, individual data subjects must obtain fresh consent for the new purpose (unless the original purpose was compatible with the new purpose).

being now as the venerable phrase “artificial intelligence” is becoming increasingly real and increasingly applied in the business world. While at this stage, many will not be using AI, the increasing adoption of AI tools could make it a reality for many sooner rather than later.

Part 8. Conclusions

At the core of the UK's data protection law, the Data Protection Act 2018 are the principles of law. These three principles are inextricably linked, not only to each other but also to the rights bestowed upon individual data subjects.

Personal data can be an extremely valuable asset for business functions could not take place without it. The law recognises and supports this value by protecting individuals' interests and ensuring that organisations handle their data responsibly.

Providing comprehensive and user-friendly privacy notices is a key ingredient in the data protection mix. It may, at times, be an unpopular one, but highlighting personal data use that is necessary for business, however, the benefits of complying with the law, outweigh the costs. Not only is your own position strengthened, but your customer base goes a long way.

principally of the UK GDPR and Data Protection Act 2018 are the principles of law, accountability, transparency. These three principles are inextricably linked, not only to each other but also to the rights bestowed upon individual data subjects.
